## Message from the Chairman of Board of Directors

Dear Friends,

It gives me great pleasure to welcome you to the world of Arabian Zinc.

The Al-Suwaidi vision is to reduce import dependency and bring self-sufficiency in materials critical to the requirements of the industries in the Kingdom and the wider region of the Middle East. To achieve this vision, ICC & Arabian Zinc were established to explore such requirements by bringing in new technologies. The production facility for one such product, Zinc Oxide, came into existence in 1995 at Jubail Industrial City making it the largest in the region catering to the growing markets in the segments of ceramics, rubber, plastics, among others.

After considerable evaluation and, with excellent support from our valued customers in the coatings industry to whom we are extremely grateful, another milestone was achieved with the establishment of a world-class manufacturing facility to produce zinc dust by the distillation process.

This state-of-art production unit, too, is the first of its kind in the region which has been set up in Jubail Industrial City under technology transfer and assistance agreement with an acknowledged leader in this process.

Substantial investments in a fully equipped laboratory for quality control and R&D as well as adoption of an Integrated Management System reflects our customer-centric focus and also stresses our commitment towards the environment, health and safety of our people and society at large.

I welcome you to explore and benefit from the opportunities presented by Arabian Zinc through its combined production capacity in excess of 25,000 MTPA.

Al Suwaidi Holding Company (SHC), the parent holding company of Intermediate Chemicals Co. Ltd. (ICC), is a Fortune 100 Saudi company comprising of 10 Strategic Business Units (SBU) employing over 15,000 people.

Arabian Zinc under the umbrella of Intermediate Chemicals Co. Ltd. (ICC), the chemicals manufacturing SBU of the Al Suwaidi Group, manufactures various grades of zinc oxide by the French Process. This process is the most efficient method to consistently produce special high grade zinc oxides possessing high purity, brightness, refractive index as well as fine particle size.

## Main Application Area Our zinc oxide finds applications in the following industries

-  Polymer (as additive as Acid neutralizer & Anti UV)
-  Paint (for Corrosion Protection)
-  Fibre glass
-  Oil Drilling (as Hydrogen Sulphide scavenger)
-  Animal Feed (as Micronutrient)
-  Pharmaceutical and Medical Care (Vit./Bact./UV)
-  Ceramic (in Frits manufacturing & Sanitary items)
-  Rubber & Tire (as Polymerization Activator)
-  Catalyst (for Sulphur Removal)
-  Micronutrient Fertilizer (as controlled release of Zinc Sulphate to the soil)

## Quality Control

All raw materials and finished products are stringently evaluated for all quality parameters like impurity profile and surface area among others.

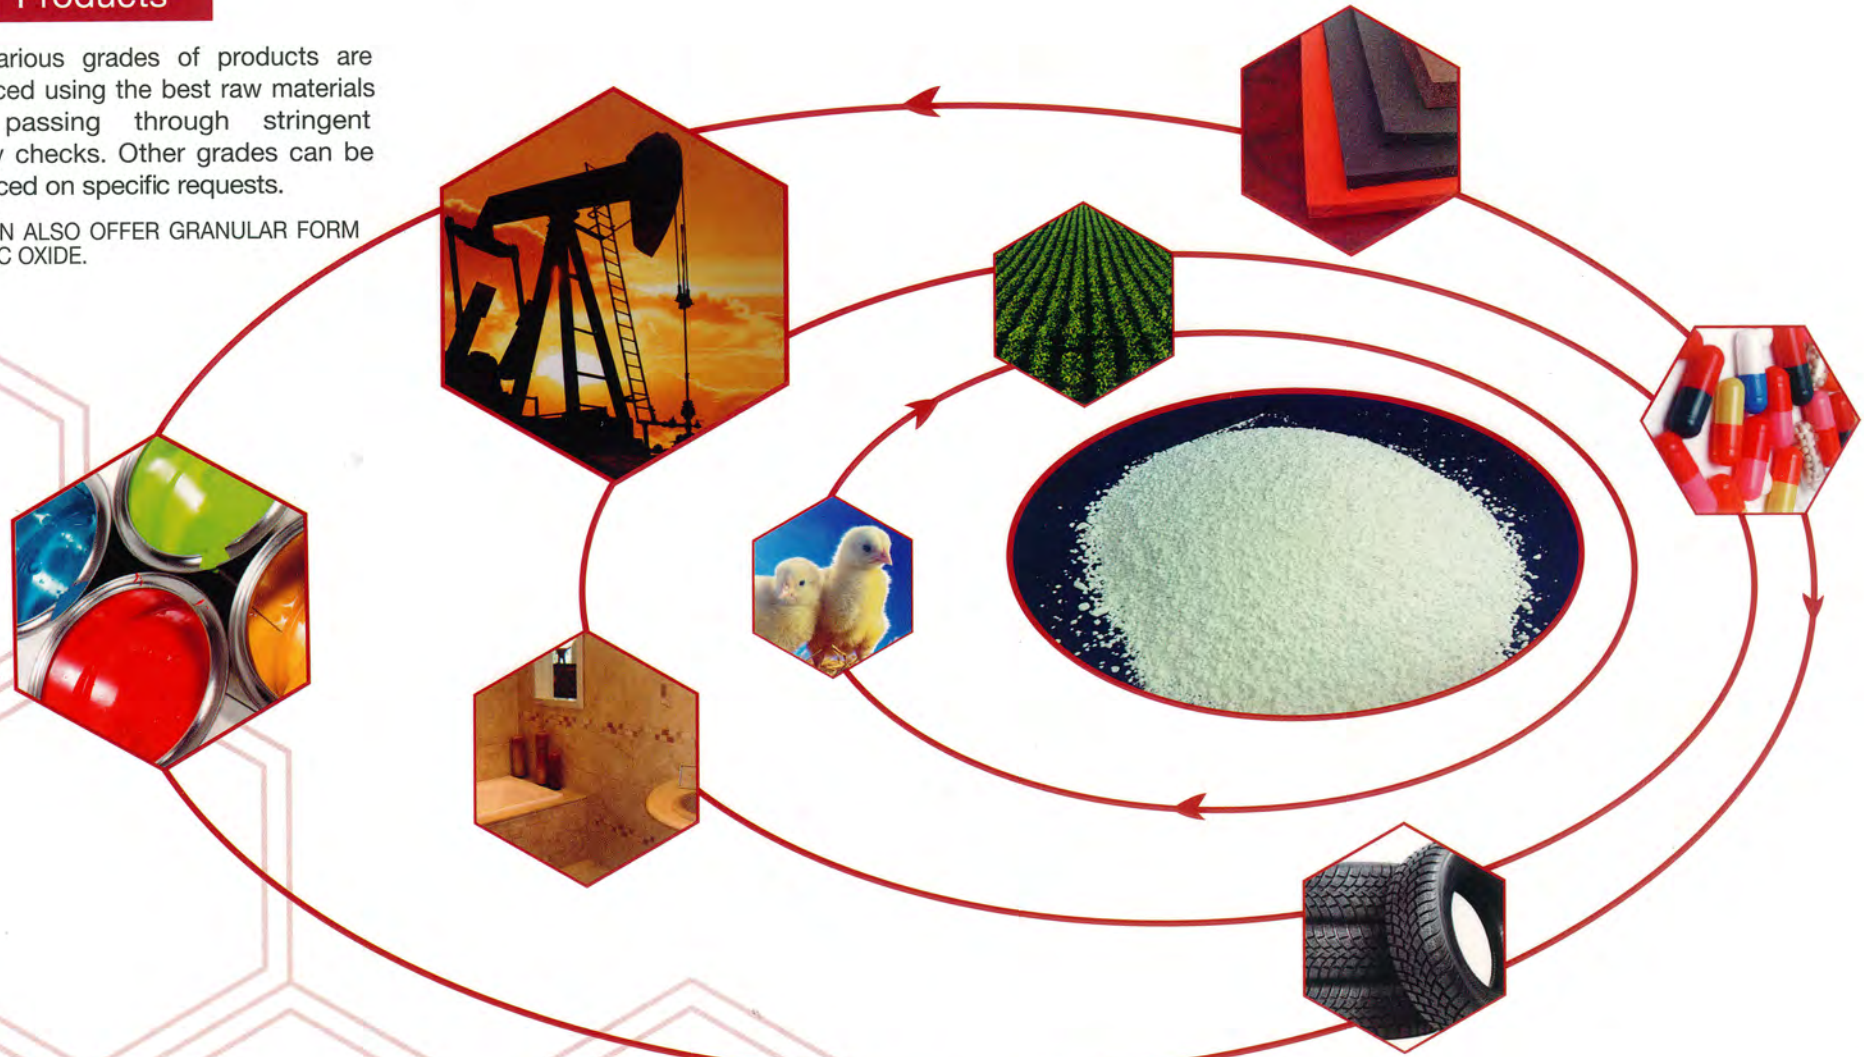

The plant, located in Jubail Industrial City, Kingdom of Saudi Arabia, produces various grades for below applications

## Products

The various grades of products are produced using the best raw materials and passing through stringent quality checks. Other grades can be produced on specific requests.

WE CAN ALSO OFFER GRANULAR FORM OF ZINC OXIDE.

### Packaging

In any of the following packaging options as required by customer –

- 25 kg polypropylene bags with inner liner
- 1000 kg polypropylene FIBC ( Bulk Bags )
- In customer required packing

### **For your requirements, please contact –**

Mr. Naser H. Al-Shehri (Commercial Manager)
